195	65810	IC201912487	Odisha State Open University	Sambalpur	Odisha	Eastern/ERO	This topic addresses the main challenges of the project i.e. Energy, Society, Education and Scalability. Under this project the University aims to provide its learners a solid foundation for developing the use of solar energy systems in the state where solar energy is available in abundance. Odisha receives an average solar radiation of 5.5 kWh/ Sqm area with around 300 clear sunny days every year. The feasible potential for power generation in the Solar Photovoltaic and the Solar thermal routes have been roughly estimated as 8000 MW and 2000 MW respectively. The students, faculty and staff associated with this program will be benefitted from experimental learning with a global and innovative approach that will make the student and our degree programs more interactive, and invigorates an approach to research that translates knowledge into solutions. The project shall provide opportunity for training and capacity building. We propose to collaborate with neighboring educational and indus	Prashansa Das

Microalgae plays a pivotal role in this idea. They will utilise CO2 (waste from Industries) and organic material (waste wafor its growth and produce Oxygen and valuable Biomass that can be utilised for bio energy production in HABS (hybrid algae approved bioreactor system). Each kilogram of microalgae produced consumes 1.6 kilograms of Co2. Thereby, utilising based products such as the CO2 and wastewater, be get valuable Biomass and oxygen. Hence Energy and useful product will be generated from waste products.	Divyanshi Singhal
